

## Innovation

Entrepreneurship, Research and Education join forces here. The Dutch Innovation Park stimulates this collaboration and together they pave the way for next-level innovations that create a better society. How? For example, with the new educational approach Innovative Development of The Hague University of Applied Sciences in the Dutch Innovation Factory: students who aspire to a high degree of independence, work under the guidance of ICT experts and researchers from the business community on real IT challenges from entrepreneurs.

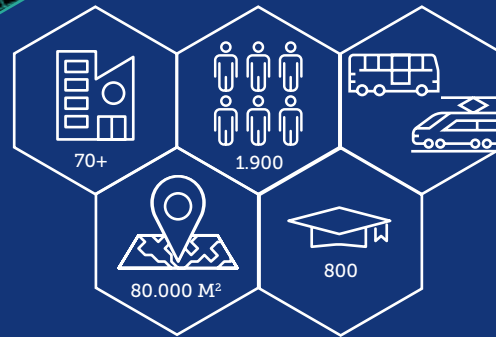

## Horizon

Good accessibility for everyone, with every conceivable means of transport. The Dutch Innovation Park is ready for the future. Studying, doing an internship, starting a company, giving your organisation and employees the space they need? There are plenty of opportunities.

Dutch Innovation Park offers and accommodates:

- 80.000+ m<sup>2</sup> office and industrial space
- 70+ companies and start-ups
- Approx. 1.900 professionals and 800 students
- Centrally located in metropolitan region Rotterdam-The Hague
- Next to the public transport hub Lansingerland-Zoetermeer: train, RandstadRail and bus station

# Connection and opportunity

next-level innovation

## Looking to the future through growth and synergy

Dutch Innovation Park: centre for cyber security, e-health & care, smart mobility and big data. This is where knowledge, research, capital, training, start-ups and renowned companies come together to build a better future.

### Crossover

The focus of the Dutch Innovation Park is future-oriented learning and working. Students and entrepreneurs find partners and resources to make alliances and to innovate. IT students in the Dutch Innovation Factory learn from established companies in the Dutch Tech Campus and vice versa – a productive interaction.

- **Dutch Innovation Factory:** the heart of an innovative IT community | The Playground for Digital Innovators
- **Dutch Tech Campus:** renowned international tech companies in a campus setting

**52° 2' 44.045" N 4° 30' 52.132" E**

Once upon a time the innovative dairy product, margarine, was made here. In 2015, the location was transformed into the beating heart of the applied IT industry, where companies, knowledge institutions and organisations work together on labour market-oriented education, sector-oriented research and economic development.

### The Dutch Innovation Park is home to:

- Research groups and lectorates: data science and cyber security for small and medium-sized enterprises
- Fieldlabs: gaming, Internet of Things, e-health & care, cyber security
- Innolabs: healthcare innovation and neighbourhood need analysis
- Labs: big data innovation hub, IoT lab, Innovation Lab and more
- Incubators/accelerators: Crosspring and Grey Valley Inc.

### Challenges

Challenges are part of this labour market-oriented education. Two examples of innovative collaborations:

**Elvin Korac**, student in Business Sciences in IT & Management at The Hague University of Applied Sciences: "For our graduation thesis we have made an app with which we measure the degree of stress among students. You take a picture of your face and then can get a diagnosis. We use algorithms and facial recognition, among other things."

**Marcel van der Walle**, managing partner at Morphé:

"Eco4Care is a care app that brings multiple factors together. As a result, care for vulnerable elderly people is better coordinated and close relatives, informal caretakers and care providers can work together more effectively."

### Connection

No connection without a network, both digitally and in real-life. The Dutch Innovation Park supports this by facilitating inspiring events. Meetings with motivating speakers, valuable contacts from the industry and in-depth activities. That's where real growth comes from.

View [www.dutchinnovationpark.nl](http://www.dutchinnovationpark.nl) for an up-to-date overview of events.

### Future

Every day is all about making new plans and developing promising ideas. The Dutch Innovation Park is continuously developing – from the realisation of new business spaces, the facilitation of crossovers and innovative projects, to student housing and housing for employees and expats. This way, the park becomes a place for both social and technological innovation for people and technology.

- **For students:** Training at secondary or higher level for a future-oriented job. Internships at leading companies and research assignments within the lectorates are easily accessible for everyone.
- **For companies:** Start or grow through the development of knowledge, an inspiring environment and extensive R&D opportunities.
